Enhance Your CORE  
Mathematics Session 1 (8 Apr)  
F.4 Selected Topic: Exponential and Logarithmic Functions

1. Law of rational indices

The law of indices is the extension of laws of integral indices.  
For real number  $p$  and  $q$  and positive numbers  $a$  and  $b$ :

(i)  $a^0 = 1$

(ii)  $a^{-p} = \frac{1}{a^p}$

Law (1):  $a^p \times a^q = a^{p+q}$

Law (2):  $a^p \div a^q = a^{p-q}$

Law (3):  $(a^p)^q = a^{pq}$

Law (4):  $(ab)^p = a^p b^p$

Law (5):  $\left(\frac{a}{b}\right)^p = \frac{a^p}{b^p}$

Example 1.  
Simplify the following expressions and express your answers with positive indices.
